

STATEMENT OF PURPOSE

I was born in a period where technology is advancing and playing a vital role in every one's life in both the present and the future. Since childhood I astonished with the technologies and their enhancement. This fascination flourished with the age and later overwhelmed by the ability to make machine execute instructions at my behest and its endless applications, I concluded to pursue a career in this field. I have been acquiring problem solving skills with code. I am anxious to apply my knowledge on practical applications, so internship opportunity helps me to engage in real practices.

I am currently pursuing III/IV B. Tech (1st semester of 3rd year) in R.V.R & J.C. College Of Engineering including majors with a decent cgpa. As an enthusiastic computer science student, I have been skilled in many aspects of programming. Currently I have been training for DevOps by EPAM and cloud computing services through AWS. I also developed a project in Machine Learning and participated in multiple competitions. Primarily I became comfortable with python and also my interests took towards Java Programming as it had vast application usage with the real-world industries. I gained knowledge on various domains C, Python, SQL, R, Web Development, Data Structures and Mobile App Development along with java in my curriculum.

Though I learned java as a part of academic curriculum, I have completed a course in NPTEL along with the curriculum to gain more knowledge. Despite of theoretical and small application programs, I have thirst and eagerness to learn latest technologies to acquire a practical experience in java which is most essential with evolving technologies of this era. I am interested to work on web development with JDBC, servlets, databases which are related to java. Hence, the internship opportunity helps me to gain more experience and knowledge in the related aspects.

This opportunity would be significant step to reach my aspirations. I hope that my internship statement of purpose sample will showcase my eligibility for an internship in this profession. I would feel privileged to work with honourable professors at prestigious institutions to obtain the opportunity for research experiences.

Thanking You,

T. Jaya Chandrika.
